

DOPAK® Process Sampler Type DPM system purge configuration (A3)

The ability to purge the sample point ensures optimal retrieval of a representative and contamination free sample. The DPM type sampler in system purge configuration allows product to flow continuously through the sampler ensuring a fresh sample.

1 OPERATION/FUNCTION

0 - off
Provide a new septum on your sample bottle. Insert the bottle, with cap and septum into the sleeve until the septum is pierced by the needles. Put the bottle retaining clip in place.

1 - system purge
Turn the handle to the "bypass" position, allowing a continuous flow of liquid through the sampler to ensure representative sampling. This position can be held for any required time.

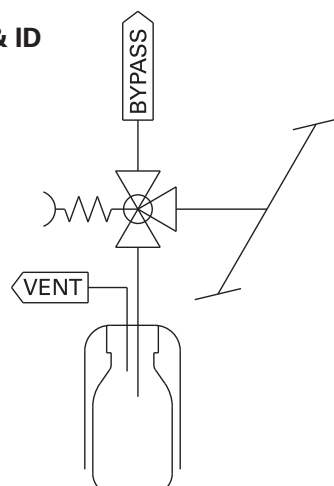

2 - sample
Turn the handle to the "sample" position, allowing the product to flow into the sample bottle. When the required amount has been taken, turn the handle to the "off" position.

3 - off
Remove the bottle retaining clip and pull the bottle out from the sleeve. The septum reseals automatically.

2 TYPICAL P & ID

System purge (A3)

3 FEATURES/ADVANTAGES/PROPERTIES

- Sampling directly under process conditions
- Low pressure application
- Representative sampling
- Zero dead volume
- Closed sampling

4 BASIC SPECIFICATIONS

Material	SS316, SS316L.	
Sleeve type	60cc sleeve with bottle retaining clip.	
Needle assembly	Single piece VTO needle assembly with vent to outlet connection 1/4" FNPT. Process/vent needle ID: 1.35 mm.	
Valve	Three-way ball valve type W83. PTFE seats, Viton A O-rings. Pressure range 103 bar @ 20°C (1500 psig @ 70°F). Temperature range -17/+232°C (0/+450°F).	
Operation	Manual.	
Connections	1/4" FNPT.	
Please note:	the above is a basic specification only. DOPAK® Samplers can be offered with a wide variety of options as mentioned below.
